The Honorable John Barrasso  
Chairman  
Committee on Environment and Public Works  
United States Senate  
307 Dirksen Senate Office Building  
Washington, DC  20510

The Honorable Tom Carper  
Ranking Member  
Committee on Environment and Public Works  
United States Senate  
513 Hart Senate Office Building  
Washington, DC  20510

Dear Chairman Barrasso and Ranking Member Carper:

On behalf of Western Governors, I commend your leadership in advancing the America’s Conservation Enhancement Act. This bipartisan legislation reflects a number of Western Governors’ Association (WGA) priorities regarding the management and conservation of fish and wildlife.

In particular, WGA supports provisions of the bill that would establish a task force within the U.S. Fish and Wildlife Service to combat the spread of chronic wasting disease through direct assistance to state fish and wildlife management agencies that are working to contain and manage the spread of this disease. On this point, please see the attached WGA letter to congressional leadership expressing support for expanded funding to state fish and wildlife agencies to combat chronic wasting disease.

WGA further supports the establishment of a study to better understand factors that influence successful delivery of funds for fish and wildlife conservation and implementation of conservation agreements, plans and other cooperative agreements. In WGA Policy Resolution 2017-11, *Species Conservation and the Endangered Species Act*, Western Governors emphasize that incentives and additional funding for species conservation programs and projects are essential to address threats to both listed and at-risk species. This includes policy proposals, like the Recovering America’s Wildlife Act, to direct additional funds to state fish and wildlife agencies for the purpose of proactive conservation of both common and at-risk species.

I thank you again for your leadership and hope that Congress will consider WGA a resource and partner in advancing legislation that will benefit fish and wildlife in the west.

Sincerely,

James Ogsbury  
Executive Director

Dear Majority Leader McConnell, Minority Leader Schumer, Speaker Pelosi, and Minority Leader McCarthy:

The Western Governors’ Association (WGA) appreciates the efforts of Congressional leaders to raise awareness of, and provide funding for, research and management of Chronic Wasting Disease (CWD). On behalf of Western Governors, I am writing in support of expanded funding to state fish and wildlife agencies for research, testing, monitoring, prevention and management of CWD in wildlife populations.

CWD is a contagious and 100 percent fatal disease affecting deer, elk, moose, reindeer and other cervid species. The disease currently exists in at least 24 states (including several in the West), and the economic burdens of monitoring and managing CWD in wild populations falls largely on state agencies. Under the Pittman-Robertson Act, state fish and wildlife agencies derive a large portion of their funding from hunting and fishing license sales and federal excise taxes on hunting and fishing equipment. As the disease spreads, license and hunting equipment sales may decline as a result of increased complications and concerns associated with hunting in areas where CWD is present. This creates a situation where funding to state fish and wildlife agencies responsible for fighting CWD is gradually eroded, as the costs of combating CWD continue to rise along with its incidence.

WGA commends Congressional leaders who have prioritized funding and support to state fish and wildlife agencies to help monitor, manage and contain the spread of CWD in wild cervid populations. Beyond support to state agencies on the front lines combating CWD, funding for scientific research to better understand and manage CWD is critical. Advances in diagnostic testing – in particular the development of an effective test for live animals – will enable state wildlife managers to more rapidly detect and respond to the disease.

As Congress considers means of funding research on CWD, I direct your attention to the Special Report of WGA’s Biosecurity and Invasive Species Initiative, which highlights the importance of research in controlling wildlife diseases, including CWD. The report recommends that institutions researching wildlife diseases look for opportunities to pool funding resources and exchange information across administrative lines. Wildlife diseases such as CWD present significant threats to western resources and would benefit from the use of pooled resources and collaborative
research efforts. By pooling resources, state, federal and private researchers can decrease redundancy and increase the efficiency of research funding.

Western Governors look forward to working with you to identify and promote legislative efforts to support state wildlife management agencies in their fight against CWD and other forms of wildlife disease.

Sincerely,

James D. Ogsbury
Executive Director
