House of Representatives
Washington, DC 20515

The Honorable Kevin McCarthy
Minority Leader
H-204 The Capitol
House of Representatives
Washington, DC 20515

Dear Majority Leader Schumer, Minority Leader McConnell, Speaker Pelosi, and Minority Leader McCarthy:

Given the utmost importance of water to the western United States, Western Governors applaud congressional action on the Water Resources Development Act (WRDA) of 2022. As U.S. House and Senate conferees work to create a final version of WRDA 2022, Western Governors express support for several West-specific provisions that reflect Western Governors' Association (WGA) policy priorities. We urge their inclusion in the final version of the legislation.

Technical and Planning Assistance to States

Section 109 of H.R. 7776, Technical Assistance, increases the funding authorization for technical assistance in Section 22 of WRDA 1974 (Federal State Cooperation) from \$15 million to \$30 million annually, and authorizes the U.S. Army Corps of Engineers (USACE) to waive the cost of such assistance to economically disadvantaged communities. Further assisting these disadvantaged communities, Section 110 of H.R. 7776, Outreach and Support for Underserved Communities, directs USACE to increase outreach and support to communities, with a prioritization for disadvantaged rural and urban communities and tribes. Section 106 of S. 4136, Planning Assistance to States, creates an entirely new subsection to Section 22 of WRDA 1974 focused on outreach to states for water resources development needs, and authorizes that outreach at \$30 million annually.

In WGA Policy Resolution [2021-08](#), *Water Resource Management in the West*, Western Governors note that USACE's Planning Assistance to the States (PAS or "Section 22") program funds critical work on comprehensive water resources planning in western states. In WGA Policy Resolution [2020-07](#), *Rural Development*, Western Governors note that capacity constraints can limit rural communities' ability to access federal programs. Western Governors request that the conference committee increase the proportion of infrastructure funding that goes toward capacity building and supports efforts to enhance coordination between states and federal agencies.

The Honorable Charles Schumer
The Honorable Mitch McConnell
The Honorable Nancy Pelosi
The Honorable Kevin McCarthy
June 30, 2022
Page 2

Western Water Cooperative Committee / Surplus Water Issue

Section 117 of S. 4136, Flood Control, establishes a Western Water Cooperative Committee, made up of 18 western states (all of which are in WGA's geographic footprint). The committee is intended to help states and USACE ensure that the agency's flood control projects are operated consistent with congressional directives and do not conflict with state water rights and water laws. Western Governors appreciate the Senate bill's recognition in Section 117 that increased collaboration between states and USACE will provide greater alignment between USACE's development of flood control projects and state water rights and water laws.

Section 337 of S. 4136, Surplus Water Fees, permanently eliminates surplus water fees in the Upper Missouri Mainstem Reservoirs. Western Governors support the Senate provision, as it protects these state authorities and legal rights.

In WGA Policy Resolution [2021-08](#), *Water Resource Management in the West*, Western Governors note that states are the preeminent authority on water management within their boundaries, and that federal water resources development legislation should recognize natural flows and defer to the states' legal right to allocate, develop, use, control, and distribute such waters.

Investment in Recreation Areas

Section 213 of S. 4136, Investments in Recreation Areas, requires USACE to submit a report on investments needed to support recreational activities that are part of authorized water resources development projects. Similarly, Section 107 of H.R. 7776, Public Recreational Amenities in Ecosystem Restoration Projects, authorizes USACE to consider the inclusion of recreational amenities into ecosystem restoration projects. Furthermore, Section 208 of H.R. 7776, Report to Congress on Economic Valuation of Preservation of Open Space, directs USACE to produce a report evaluating existing policies for the valuation of preserving open space, recreation areas, and habitat as part of water resources development projects.

WGA Policy Resolution [2020-07](#), *Rural Development*, states that Western Governors promote rural development policies that focus on quality of life to develop rural communities that are attractive places to live and work. At the same time, such policies must protect the rural character, natural resource-based industries, and natural areas of these communities. For that reason, Western Governors encourage increased flexibility in the use of federal economic development resources to facilitate investments in quality of life and amenities in rural communities, and support the three provisions noted above.

As efforts to negotiate the final version of WRDA 2022 get underway, Western Governors urge the conference committee to consider these recommendations and work to protect state interests and authority. To further inform your work, attached please find the following WGA policy resolutions, which detail Western Governors' policy on issues relevant to the sections addressed in this letter:

The Honorable Charles Schumer
The Honorable Mitch McConnell
The Honorable Nancy Pelosi
The Honorable Kevin McCarthy

Policy Resolution 2021-08

Water Resource Management in the West

A. BACKGROUND

1. Water is a crucial resource for communities, industries, habitats, farms, and western states. Clean, reliable water supplies are essential to maintain and improve quality of life. The scarce nature of water in much of the West makes it particularly important to our states.
2. States are the primary authority for allocating, administering, protecting, and developing water resources, and they are primarily responsible for water supply planning within their boundaries. States have the ultimate say in the management of their water resources and are best suited to speak to the unique nature of western water law and hydrology.
3. Many communities in the West anticipate challenges in meeting future water demands. Supplies are nearly fully allocated in many basins across the West, and increased demand from population growth, economic development, and intensifying extreme weather and fire events places added stress on those limited water resources. Sustainability of our natural resources, specifically water, is imperative to the foundations upon which the West was developed. Growth and development can only continue upon our recognition of continued state stewardship of our unique resources and corresponding responsibilities.
4. Strong state, regional and national economies require reliable deliveries of good-quality water, which in turn depend on adequate infrastructure for water and wastewater. Investments in water infrastructure also provide jobs and a foundation for long-term economic growth in communities throughout the West. Repairs to aging infrastructure are costly and often subject to postponement.
5. Western Governors recognize the essential role of partnership with federal agencies in western water management and hope to continue the tradition of collaboration between the states and federal agencies.
6. Tribal nations and western states also share common water resource management challenges. The Western Governors Association and Western States Water Council have had a long and productive partnership with tribal nations, working to resolve water rights claims.

B. GOVERNORS' POLICY STATEMENT

1. **State Primacy in Water Management:** As the preeminent authority on water management within their boundaries, states have the right to develop, use, control and distribute the surface water and groundwater resources, subject to international treaties and interstate agreements and judicial decrees.

- a. **Federal Recognition of State Authority:** The federal government has long recognized the right to use water as determined under the laws of the various states; Western Governors value their partnerships with federal agencies as they operate under this established legal framework.

While the Western Governors acknowledge the important role of federal laws such as the Clean Water Act (CWA), the Endangered Species Act (ESA), and the Safe Drinking Water Act (SDWA), nothing in any act of Congress or Executive Branch regulatory action should be construed as affecting, usurping, or intending to affect or usurp states' primacy over the allocation and administration of their water resources.

Authorization of federal water resources development legislation, proposed federal surplus water rulemakings, and/or storage reallocation studies should recognize natural flows and defer to the states' legal right to allocate, develop, use, control, and distribute such waters, including but not limited to state storage and use requirements.

- b. **Managing State Waters for Environmental Purposes:** States and federal agencies should coordinate efforts to avoid, to the extent possible, the listing of water-dependent species under the ESA. When ESA listings cannot be avoided, parties should promote the use of existing state tools, such as state conservation plans and in-stream flow protections, to conserve and recover species.

2. **Infrastructure Needs:** Aging infrastructure for existing water and wastewater facilities and the need for additional water projects cannot be ignored. Water delivery and wastewater infrastructure investments are essential to our nation's continued economic prosperity and environmental protection, and they assist states in meeting federally-mandated standards under the CWA, SDWA, and other federal statutes. Western Governors support efforts to make the most of existing infrastructure while seeking creative solutions to add more infrastructure with limited resources.

- a. **Federal Support for Infrastructure Investment:** Congress should provide adequate support for the CWA and SDWA State Revolving Funds. Further, Congress should support restoration and repair of aging water infrastructure, commit to aiding efforts to address the recurring drought conditions across the West, and fully utilize the receipts accruing to the Reclamation Fund for their intended purpose in the continuing conservation, development and wise use of western resources to meet western water-related needs, including the construction of Congressionally-authorized Bureau of Reclamation rural water projects and facilities that are part of Congressionally-authorized Indian water rights settlements.

Congress should authorize federal water resources development legislation on a regular schedule and appropriate sufficient funding so that all projects and studies authorized in such legislation can be completed in a timely manner.

The Bureau of Reclamation's WaterSMART Program provides valuable support to states, tribal nations, water and irrigation districts, and local entities to invest in water conservation projects and modern water delivery infrastructure.

The U.S. Army Corps of Engineers' Planning Assistance to the States (PAS or "Section 22") Program also funds critical work in western states as a program focused on comprehensive water resources planning.

Congress also should recognize the potential of greater private investment in water infrastructure, utilizing, where appropriate, such tools as loan guarantees, revolving funds, infrastructure banks and water trust funds.

Capital budgeting and asset management principles should be used to determine funding priorities based on long-term sustainability and not annual incremental spending choices. It should be accompanied by dedicated sources of funding with appropriate financing, cost-sharing, pricing and cost recovery policies.

- b. **Additional Investment Tools:** Federal and state policymakers should also consider additional tools to promote investment in water infrastructure and reduce financing costs, including: public-private partnerships, bond insurance, risk pooling, and credit enhancements.

Congress should remove the state volume caps for private activity bonds used for water and wastewater projects, provide guaranteed tax-exempt status for bonds issued by state or local agencies to finance water infrastructure, provide loan guarantees, and otherwise support and encourage the use of other financing tools.

- c. **Hydropower:** In consultation with affected states, Congress and the Administration should optimize federally-owned or licensed hydropower resources by increasing turbine efficiency and investing in conduit hydropower in irrigation canals and wastewater systems consistent with existing water diversions. Congress and the Administration should also authorize and implement federally-owned or licensed hydropower projects and programs through efficient permitting processes that: utilize new technology to improve renewable electric generation capacity, promote economic development, are consistent with the needs of native fisheries and riverine processes, and safeguard and solidify states' permitting and certification authority and indigenous peoples' rights.
- d. **Infrastructure Planning and Permitting:** Federal infrastructure planning and permitting guidelines, rules and regulations should be coordinated with state processes, and sufficiently flexible to: (1) allow for timely decision-making in the design, financing and construction of needed infrastructure; (2) account for regional differences; (3) balance economic and environmental considerations; and (4) minimize the cost of compliance.

- 3. **Western States Require Innovative and Integrated Water Management:** Western Governors believe effective solutions to water resource challenges require an integrated approach among states and with federal, tribal and local partners. Federal investments should assist states in implementing state water plans designed to provide water for municipal, rural, agricultural, industrial and habitat needs, and should provide financial and technical support for development of watershed and river basin water management plans when requested by states.

Integrated water management planning should also account for flood control, water quality protection, and regional water supply systems. Water resource planning must preserve state authority to manage water through policies which recognize state law and financial, environmental and social values of water to citizens of western states today and in the future.

- a. **Water Transfers:** Western Governors recognize the potential benefits of market-based water transfers, meaning voluntary sales or leases of water rights. The Governors support water transfers that avoid or mitigate damages to agricultural economies and communities without causing injury to other water rights, water quality, and the environment.
- b. **Energy Development:** Western Governors recognize that energy development and electricity generation may create new opportunities for limited water resources. Western Governors recommend increased coordination across the energy and water management communities and support ongoing work to assess interactions between energy generation and water availability in the Western Interconnection.
- c. **Conservation and Efficiency:** Because of diminished water resources and declining and inconsistent snowpack, Western Governors encourage adoption of strategies to sustain water resources and extend existing water supplies further through water conservation, water reuse and recycling, desalination and reclamation of brackish waters, and reductions in per capita water use. The Governors encourage the use of and research into promising domestic, municipal, industrial, produced, and agricultural water conservation strategies and technologies.
- d. **Local Watershed Planning:** Western Governors encourage federal agencies and Congress to provide resources such as technical support to states and local watershed groups. States may empower these watershed groups to address local water issues associated with water quality, growth and land management to complement state water needs.
- e. **Forest Health and Soil Stewardship:** Better land management practices for forests and farmland may help improve water availability and soil moisture retention. Wildfires can cause sediment runoff in water systems, leading to problems for reservoir management and water quality. Governors support policies and practices that encourage healthy and resilient forests and soils in order to make the most of existing water supplies.
- f. **Intergovernmental Collaboration and Conflict Resolution:** Western Governors support the settlement of interstate water disputes, Indian and Native Hawaiian water rights claims, and other federal water needs and claims, the settlement of which are in the best interest of western states.
- g. **State-Federal Coordination:** Western Governors recognize the important role of federal agencies in water resource management in the western states. Governors appreciate the efforts of federal agencies to coordinate water-related activities, particularly through the Western States Water Council, and support the continuation of these key state-federal partnerships.

4. **Western States Need Reliable Water Resource Information:** Basic information on the status, trends and projections of water resource availability is essential to sound water management.
 - a. **Basic Water Data:** Western Governors support federal programs dedicated to the improvement of data on snowpack, streamflow, soil moisture, and forecasting, including the Natural Resources Conservation Service’s Snow Survey and Water Supply Forecasting Program; the National Oceanic and Atmospheric Administration’s weather and hydrology-related data collection, monitoring, and drought information programs, including the National Integrated Drought Information System; the U.S. Geological Survey’s Groundwater and Streamflow Information Program; and the National Aeronautics and Space Administration’s National Land Imaging (Landsat) Program. Western Governors further support federal efforts to coordinate water data gathering and information programs across multiple agencies.
 - b. **Extreme Weather Events Planning:** Western Governors recognize the significant effects posed by extreme weather events and variability in water supplies. Western Governors urge Congress and the Administration to work closely with states and other resource managers to improve predictive and adaptive capabilities for extreme weather variability and related impacts. We specifically urge the federal government to place a priority on improving the sub-seasonal and seasonal precipitation forecasting capabilities that could support water management decision-making.
 - c. **Water Data Exchange:** The Western Governors’ Association and the Western States Water Council have worked together to create the Water Data Exchange, an online portal that will enable states to share their water data with each other, federal agencies, and the public via a common platform. The Governors encourage the use of state water data in planning for both the public and private sectors.

C. GOVERNORS’ MANAGEMENT DIRECTIVE

1. The Governors direct WGA staff to work with Congressional committees of jurisdiction, the Executive Branch, and other entities, where appropriate, to achieve the objectives of this resolution.
2. Furthermore, the Governors direct WGA staff to consult with the Staff Advisory Council regarding its efforts to realize the objectives of this resolution and to keep the Governors apprised of its progress in this regard.

This resolution will expire in June 2024. Western Governors enact new policy resolutions and amend existing resolutions on a semiannual basis. Please consult <http://www.westgov.org/resolutions> for the most current copy of a resolution and a list of all current WGA policy resolutions.

Policy Resolution 2020-07 Rural Development

A. BACKGROUND

1. Vibrant and prosperous rural communities are essential components of western states and the nation. Rural communities in the West grow and supply food, steward natural resources, contribute disproportionately to the armed services, and are critical to state economies.
2. Rural communities in the West are richly diverse and face varying threats and opportunities. They do, however, share common characteristics, such as low population density and distance from urban centers, that create challenges for economic development.
3. Nationally, the rural population is increasing slowly after a period of decline from 2010-2017, although there is great variation in demographic trends at the county level. Many rural western counties are experiencing population growth due to net migration of retirees as well as people seeking quality of life and amenities.
4. Most rural communities have a higher proportion of older residents than urban and suburban communities. Rural communities are preparing for an anticipated wave of retirements, leading to a reduction in skilled workforce and potential closure of local businesses.
5. Western states have many of the highest per-capita veteran populations in the nation. It is estimated that approximately 25 percent of all veterans live in rural areas. These veterans have lower rates of employment compared to veterans living in urban areas and to their non-veteran rural colleagues.
6. Most rural communities have experienced slower economic and job growth than their urban counterparts and have not yet fully recovered from the 2008 recession. Many rural economies rely heavily on a few industries. This makes these communities more sensitive to trends affecting those industries and can make it more difficult to recover from disruptions. Rural communities have also been significantly affected by the COVID-19 public health threat and will suffer distress from any associated economic downturn.
7. Federal programs for rural development are spread across multiple agencies. Some agencies are responsible for rural infrastructure investments while others focus on economic development. The multiplicity of administrating entities and the lack of consistency across agencies: renders it difficult for rural stakeholders to navigate federal programs; compounds time and expense needed to apply for funding opportunities; and creates inefficiencies in the distribution of resources.
8. The vast majority of federal loan and grant programs for rural communities are targeted to physical infrastructure. Little funding exists to support development of local capacity, including strengthening community organizations, nonprofit entities, and other groups serving rural communities.

9. By offering opportunity, connectivity, and quality of life, rural communities can thrive and prosper while improving economic stability and protecting the rural character and natural resources that draw people to these areas.
10. Small businesses, including farming and ranching, are the foundation of rural economies, generating tax revenue, creating jobs, providing essential goods and services, and contributing to the culture and character of small towns. Building a successful business in a rural community is particularly challenging due to limited access to capital, available workforce and smaller customer bases. Many successful rural businesses operate on thin margins and if they close, are extremely difficult to replace.
11. High-speed internet, commonly referred to as “broadband,”¹ is the critical infrastructure of the 21st century and a modern-day necessity for individuals, businesses, schools and government. Many rural western communities lack the business case for private broadband investment due to the high cost of infrastructure and the low number of customers in potential service areas. This has left many rural businesses and citizens at a competitive disadvantage compared to urban and suburban areas with robust broadband access.
12. Transportation connectivity is critical to strengthening economies and improving quality of life. Air service is particularly important to connect remote western communities to urban hubs. Pilot shortages, infrastructure constraints, and airline consolidation have negatively impacted rural air connectivity. The airline industry has been significantly impacted by COVID-19 and rural service, which is typically the least profitable, has been reduced.

B. GOVERNORS' POLICY STATEMENT

1. Western Governors believe that strengthening social infrastructure in rural communities is the best strategy to ensure rural quality of life and prosperity. Congress and federal agencies should increase the proportion of rural economic development and infrastructure funding that goes toward capacity-building. Accordingly, Western Governors call for ample and consistent federal funding for institutions, training, and technical assistance. Robust social infrastructure is fundamental to economic and community development and maximizes the impact of state and federal resources.
2. Social infrastructure is especially critical during disasters or crises. The COVID-19 pandemic and associated economic crisis have illustrated the challenge of rapidly deploying resources to the most urgent needs. Western Governors are committed to strengthening the resilience of rural communities by helping to foster local leadership and strengthen networks and connections within and among rural communities across the West.
3. Western Governors believe that many federal programs for rural development and distressed communities include unintended barriers for rural individuals and entities that need assistance most. Western Governors urge federal agencies to work with states to: thoroughly evaluate program requirements; identify barriers for rural applicants; and revise onerous requirements in a manner that recognizes the limited resources and capacity of rural applicants. In particular, Western Governors are concerned by:

¹ The Federal Communications Commission defines fixed “broadband” as service offering minimum speeds of 25 Megabits per second (Mbps) down and 3 Mbps up.

- a. Scoring criteria that relate to numerical size and impact, such as the number of jobs created or the number of people served, which disadvantage small and isolated communities;
 - b. Requirements that applicants partner with other institutions like community colleges or foundations, which may not operate in the rural community seeking assistance;
 - c. Financial match or cash-on-hand requirements that rural organizations cannot meet; and
 - d. Overly complicated or technical applications that deter rural customers from applying.
4. Western Governors also urge federal agencies to use state data for eligibility determinations when requested by states. States often have more up-to-date and granular data for rural communities than federal sources.
5. Western Governors recognize and support efforts at the federal and state level to coordinate the deployment of resources, leverage funding, and create one-stop application processes for rural customers. Western Governors are interested in exploring strategies to expand those models to include more funders and further enhance coordination between agencies and between states and the federal government.
6. Western Governors believe that changes in our economy, labor force, and technological innovations require fundamental changes in economic development strategies. Western Governors promote rural development policies that focus on quality of life and the support of small businesses and entrepreneurs. This will develop rural communities that are attractive places to live and work while protecting their rural character, natural resource-based industries, and natural areas.
7. In the wake of disasters in rural communities, including the COVID-19 pandemic, providing small businesses with the tools and resources to survive disruption and prosper again is critical for economic recovery and social stability. The impacts of COVID-19 mitigation measures have illustrated the urgent need for working capital to stabilize rural businesses and ensure their continued viability during periods of prolonged disruption related to disasters and emergencies. The federal response to declared disasters must include sufficient and accessible business stabilization funds, including grants and long-term, forgivable loans. Congress should also examine how such funds are distributed by the Small Business Administration (SBA), U.S. Department of Agriculture Rural Development (USDA RD), and the Economic Development Administration (EDA) to ensure that adequate systems are in place to handle demand during widespread emergencies.
8. During COVID-19 response, many small lenders could not access federal funds to support their communities because they did not meet program thresholds or were unable to compete against large banks. Small lenders, including community development financial institutions (CDFIs), community banks, and credit unions, are often the only lender serving rural and tribal communities. In the ongoing response to the economic impacts of COVID-19, Western Governors encourage Congress to set aside emergency relief funds for small

lenders and consider program requirements that allow those entities to participate through a streamlined process to rapidly distribute resources while maintaining fiscal accountability.

9. Western Governors are eager to work with public universities, community colleges, and the business community to expand opportunities for young people to stay in their rural communities. There is a high demand for skilled workers in rural communities and states should work together on regional solutions that provide the appropriate training and skills for the jobs that are available in rural communities where possible. Western Governors are also committed to increasing employment among veterans and the disabled community in the rural West.
10. Western Governors encourage increased flexibility in the use of federal economic development resources (particularly EDA funds) to facilitate investments in quality of life and amenities in rural communities. Governors believe that metrics based solely on the absolute number of jobs created do not reflect the important economic benefits of investments in community assets that make rural communities attractive places to live. Nor do they account for the relative impact of job creation in less populated rural communities or areas with high unemployment or poverty rates.
11. Western Governors strongly support improving and increasing broadband connectivity in the rural West through significant federal investments in mapping, deployment, and adoption. The Governors have highlighted substantive policy recommendations in the Western Governors' Association policy resolution addressing broadband connectivity.
12. Western Governors have developed robust policies addressing the challenge of providing services and maintaining infrastructure essential to communities across the vast expanse of the rural West. These policies address broadband access, healthcare, surface transportation and water quality. Western Governors are committed to working with Congress and federal agencies to improve the efficacy of federal and state programs to support critical infrastructure in the rural West.
13. Western Governors recommend further changes in approach to supporting water and wastewater infrastructure in the West:
 - a. Funding for communities not served by water systems is critically needed. Western Governors recommend set-asides to develop innovative solutions for communities and tribes that cannot be served by traditional systems.
 - b. Western Governors are concerned about shortages of certified water system operators and request a coordinated effort to increase training opportunities through the U.S. Department of Agriculture, U.S. Environmental Protection Agency, U.S. Department of Labor and college and university programs that develop these skilled workers to ensure that existing water access in rural communities can be maintained.
14. Western Governors emphasize that air service is a necessity in many rural communities. As the airline industry recovers from the economic impacts of COVID-19, Western Governors urge Congress to consider measures to address challenges in rural air connectivity, including funding for infrastructure and service subsidies.

15. Western Governors support the use of cooperative business models to preserve rural businesses and fill community needs for childcare, homecare, main street businesses, housing, and more. Western Governors recognize the need for substantial technical assistance and education in developing new cooperative businesses and support federal funding of such efforts.
16. Western Governors are concerned by food security challenges in rural communities. Rural grocery store closures jeopardize livability and community health. Western Governors are interested in exploring strategies to ensure rural food security by strengthening local agricultural economies and developing regional approaches to rural food supply chains.
17. Housing remains a critical challenge in rural communities across the West. Western Governors are committed to working together to share best practices and effective solutions for housing preservation and development in the rural West.
18. The Cooperative Extension System, which serves every county in western states, is an important asset for rural development. Western Governors believe that Cooperative Extension can play a more meaningful role in economic development efforts in distressed communities and support continued investment in the system as it responds to the changing needs of rural communities. Western Governors are committed to maximizing the efficacy of Cooperative Extension in their states.

C. GOVERNORS' MANAGEMENT DIRECTIVE

1. The Governors direct WGA staff to work with Congressional committees of jurisdiction, the Executive Branch, and other entities, where appropriate, to achieve the objectives of this resolution.
2. Furthermore, the Governors direct WGA staff to consult with the Staff Advisory Council regarding its efforts to realize the objectives of this resolution and to keep the Governors apprised of its progress in this regard.

Western Governors enact new policy resolutions and amend existing resolutions on a bi-annual basis. Please consult www.westgov.org/resolutions for the most current copy of a resolution and a list of all current WGA policy resolutions.
